models available
in Hypalon

What the regulation requires :

- Up to 2.50 m, tenders must comply with ISO/CD 6185 standard.
- As from 2.50 m, tenders must comply with European Directive 94/25/CE*.

* Enforced 16 June 1998.

Why choose a Plastimo tender ?

Bow

The new square-shaped bow, in particular on Raid and Trail series, makes the most of space on board, with additional comfort for the crew and optimum storage areas, without sacrificing performance and manoeuvrability.

Fabric

Plastimo tenders are manufactured in Plastel® fabric from Mehler Technologies, specially engineered for inflatable tenders. It features multiple layers, is highly watertight and offers outstanding resistance to abrasion, UV and marine environment. Plastel® fabric is recyclable and manufactured according to the DIN EN ISO 9001 standard.

Valves

Recessed inflation valves, for increased protection and easy access.

Inflatable floor

Our Fun models feature inflatable Heytex® floor, which ensures perfect rigidity with no distortion combined with lightweight and excellent stability.

Transom filler

Large diameter and screw-free transom filler : to prevent corrosion and offer quicker water draining.

Cone ends

On square-shaped tenders, the innovative design of reinforced cones contributes to optimised planing.
